Protecting Personal Information

Building Smart Security Habits

Chapter 1

What Is Digital Security?

Digital security means protecting your information, devices, and online accounts from unwanted access.

Every person who uses the internet creates digital information.

Examples:

messages,

photos,

account details,

passwords,

online activity.

Basic security helps reduce the chance of losing control over this information.

The goal is simple:

Use technology while keeping your information protected.

Chapter 2

Common Online Risks

The internet creates many opportunities, but also risks.

Phishing

Phishing is when someone tries to trick you into giving away information.

Examples:

fake emails,

fake login pages,

suspicious messages.

Protection:

do not open unknown links,

check senders,

think before entering passwords.

Weak Passwords

Simple passwords are easier to guess.

Avoid:

short passwords,

common words,

using the same password everywhere.

Use different passwords for important accounts.

Malicious Software

Some files and applications can harm devices.

Examples:

viruses,

spyware,

unwanted programs.

Protection:

download only from trusted sources,

keep your device updated.

Chapter 3

Protecting Your Accounts

Accounts contain valuable information.

Basic protection:

Use Strong Passwords

A good password should be:

longer,

unique,

difficult to guess.

Enable Extra Protection

Multi-factor authentication adds another security step.

It can require:

a code,

an authentication app,

device confirmation.

Check Account Activity

Regularly review:

logged-in devices,

account settings,

suspicious activity.

Chapter 4

Safe Browsing Basics

Not every website is trustworthy.

Before using a website:

Check:

the address,

spelling,

security connection.

Avoid:

unknown downloads,

suspicious advertisements,

fake offers.

Chapter 5

Protecting Personal Information

Personal information should be shared carefully.

Examples:

phone numbers,

addresses,

documents,

private photos.

Before posting or sending something, ask:

Do I need to share this?

Who can see it?

Could it be misused?

Chapter 6

Building Smart Security Habits

Security is mostly about everyday choices.

Good habits:

update devices,

use strong passwords,
avoid suspicious links,
protect important accounts,
think before sharing information.

Small actions create better protection.

Final Conclusion

The internet is a powerful tool, but it requires responsibility.

Basic digital security starts with:

awareness,
careful decisions,
protecting personal information,
maintaining good habits.

Anyone can improve their online safety by following simple security principles.
